

PROJECT OF GREEN BUS STOP AT ZWIERZYNICIECKA ST. IN BIALYSTOK

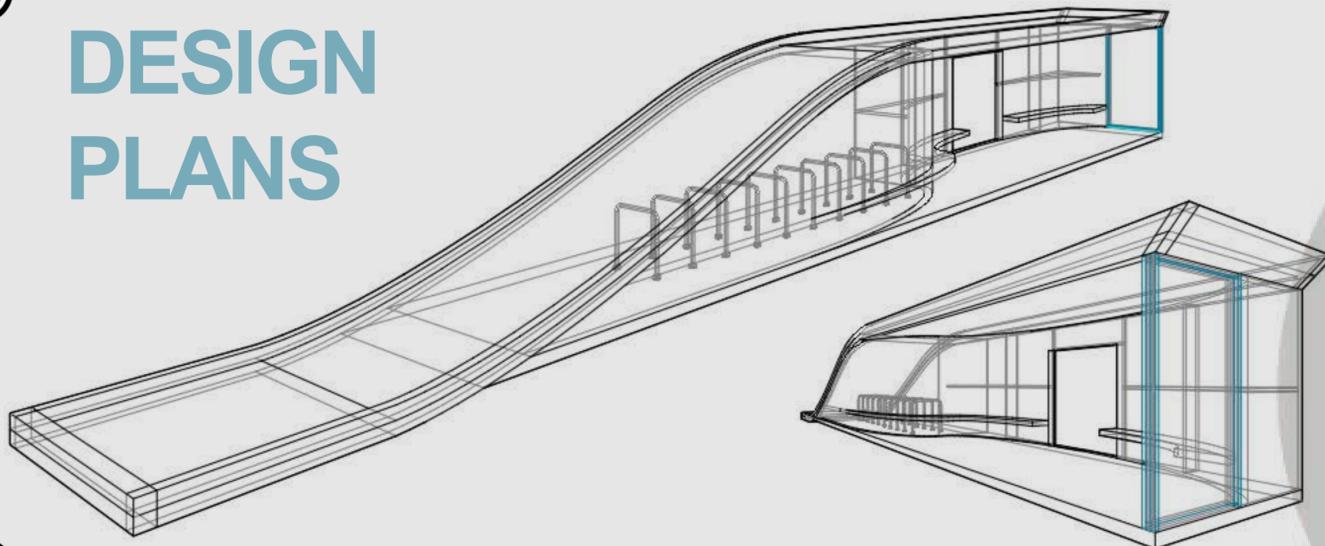

IDEA DESCRIPTION

The main purpose of the project was to create a functional form for public use, taking into account disabled people. The modernist shape is complemented by a plant roof, which helps to effectively retain rainwater up to 90%. Collected and evaporated rainwater improves the microclimate, humidity and air quality. Greenery can lower the roof temperature by up to 10°C. The design of the bus stop is inspired by the Building of the Modern Education Center of the Bialystok, which is located near the bus stop. The materials selected for the project are self-cleaning concrete, hammerglass and products to create a green roof.
